

EYEWEAR

ABSTRACT

[0027] The eyewear described comprises a unitary lens consisting of a pair of transparent sight regions and of a bridging region therebetween and a lens engaging brow frame engaging the upper edge of the lens and having its opposite ends extending through openings provided at the opposite upper ends of the sight regions. Parts of the frame and of the lens cooperate to mount the brow frame to the lens. A nose piece engages the frame and the lens to secure the assembly together.
